

ENVIRONMENTAL POLICY 2024

Mirage SpA is a historic Italian company specialized in the production of high-quality sunglasses and optical frames.

Mirage SpA assumes, as an essential principle for all subjects who operate internally and who collaborate with it, compliance with the laws and regulations in force in Italy and in all the countries in which it operates and undertakes to satisfy its compliance obligations.

Aware of the primary collective interest of safeguarding the environmental and social context, it pursues development objectives, improving its environmental performance. In this regard, Mirage SpA develops lines of sunglasses and optical frames produced with selected sustainable materials and made through responsible production processes.

Mirage SpA places environmental protection as an integral part of its activity and its development process, evaluating the impact of its activities and products, with the aim of managing it according to a preventative approach: the tools used are the implementation of an Environmental Management System according to the UNI EN ISO 14001 standard, certified for the site via Deledda in March 2023, and the ISO 14067 product Carbon Footprint for the 23° Eyewear line.

Mirage SpA develops projects and invests in new technologies, equipment, materials, giving strong emphasis to ecological products (materials of biogenic and recycled origin). In the first quarter of 2023, a new production line of milled frames from acetate sheets was launched with the aim of completing the range of products offered by Mirage. The company has committed to adopting the same environmental approach also in the new production unit dedicated to milled eyewear, following the criteria of the environmental management system according to the UNI EN ISO 14001 standard. On 15 June 2023 Mirage obtained the ISCC PLUS certification regarding the use of circular material "Acetate Renew" by Mazzucchelli, relating to the new production unit of milled glasses.

The environmental responsibility path linked to Mirage's production activity was taken into consideration by ANFAO and Certottica, who chose to involve Mirage at the working table for the creation of an international eyewear sustainability label (CSE: Certified Sustainable Eyewear, that will be launched at the Mido fair in February 2024). Specifically, Mirage expressed its contribution in defining the label criteria and testing them on 23° Eyewear models.

Mirage SpA promotes the use of the best possible technologies and an efficient use of natural resources, with particular attention to the rational management of water and energy resources. Over the years Mirage SpA has introduced molding with electric presses, purchased 4.0 production technologies, tumbling machinery with a water recirculation system; mold cooling with reduced energy use; compressed air with inverter; lighting with LED lights; photovoltaic system; electric means of transport and purchases energy produced 100% from renewable sources.

Mirage SpA is continuously looking for Partners and Customers who share these values.

Mirage SpA is constantly engaged in the process of continuous improvement of its Environmental Management System, to increase environmental performance.
